

To do Extent Report Setup in Java Selenium framework using TestNG, please follow the steps given below:

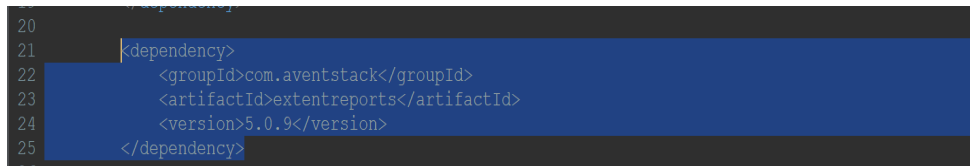

- Create a Maven project in eclipse
- Add the group_id and artifact_id in the New Maven Project window pop-up. Also you can browse the project location as per your choice

-
- Now, a pom.xml file has been created inside the framework
- Add selenium and TestNG dependencies using this [link](#)
- You can convert the class in TestNG > Right click on the class name > Hover on TestNG > convert to TestNG

- testng.xml will be created, from where we can execute more than one class/suite
- For extent report, add its dependency in the pom.xml as

- Now in the class file, add code line as (for better understanding refer to the attached file in repo)
 - report = new ExtentReports(System.getProperty("user.dir") + "\\ExtentReportResults.html");
 - test = report.startTest("FirstTest");
 - Import the necessary package for Extent Reports, Extent Test and Log Status
 - For more information, please follow this [link](#)
